1 - Executive Summary

1.1. Introduction

Business Continuity Management (BCM) is a whole of business approach for ensuring that required resources are available and specified operations can be maintained or recovered in a timely fashion in the event of disruption. This document identifies business risks and exposures that would prevent or impede the timely recovery of critical business functions. The analyzed data and the data captured will be used by TAM Capital to develop its Business Continuity Plan (BCP).

The core objectives of business continuity planning for TAM Capital are:

- To ensure the continuity of operations.
- To continue to serve customers without disruption.
- To minimize financial and reputation losses to the TAM Capital departments.
- To mitigate the adverse effects of disruptions on TAM Capital operations, strategic plans, reputation and information assets.
- To comply with the regulatory requirements.

Data collection & evaluation was addressed via Business Impact Analysis (BIA) by conducting interviews with departmental representatives, and other departmental members as appropriate. This allowed to develop the comprehensive business continuity plan which require a recovery capability. The data collected covered the following elements:

- Departmental Dependencies (internal and external).
- Maximum Tolerable Downtime for IT systems per business process
- RTO – Recovery Time Objective for each IT Applications/service as per the requirement of business processes.
- RPO – Recovery Point Objective for each IT Applications/service as per the requirement of business processes.
- Applications / systems used by each department / business process.
- Alternative Procedures or workaround.
- Vital Records.
- Key staff required in case of crisis with their contact detail.

1.2. Purpose

The purpose of this business continuity plan is to prepare TAM Capital in the event of extended service outages caused by factors beyond our control (e.g., natural disasters, fire, etc.), and to restore operations & services to the widest extent possible in a minimum time frame.

1.3. Objectives

The core objectives of BCP, in case of occurrence of an incident, for TAM Capital are:

- Preventive measures to reduce the likelihood of any occurring business disruptions.
- Prevention of any further damage to assets and information resources.
- Minimization of economic losses resulting from a business disruption.
- Documentation of the steps necessary to recover from the loss of critical facility and infrastructure resources.
- Identification of key individuals responsible for the specific activities of the recovery and restoration.
- Identification of alternate resources for reducing dependence on specific individuals or groups.
- Rapid restoration of critical business functions at an alternate processing site within an agreed period of time following an event (or following a disruption).
- Reduce services disruption to client/stakeholders due to lack of required resources such as IT systems, infrastructure, personnel
- Meet the regulatory and statutory requirements.

1.4. Scope

The Scope of BCP is to establish an overall structure for Business Continuity & Recovery operations within TAM Capital departments.

- Documentation of the steps necessary to recover from the loss of critical facility and infrastructure resources.
- Identification of key individuals responsible for the specific activities of the restoration.
- Identification of alternate resources for reducing dependence on specific individuals or groups.
- Rapid restoration of critical business functions at an alternate processing site within an agreed period of time following an event (or following a disruption).
- Meet the regulatory and statutory requirements.

1.5. Regulatory Requirements & Reference Documents:

The BCP is aligned with the relevant controls outlined in the regulatory and mandatory compliance requirements, internal organization policies and plans and international best practices.

1.6. Assumptions

The following assumptions apply to this document:

- The BCP is designed to recover from a "worst case" destruction of the primary head office operating environment.
- Criticality of business processes, application and system have been identified on the basis of the information within the appropriate RTOs as defined in BIA.
- TAM Capital should do BCP review, maintenance, testing and updates on a regular basis (plans are updated annually, and one disaster recovery test/drill at a minimum, will be performed annually) to ensure a viable state of readiness.
- Key personnel identified within the BCP, or their backups are available to execute this plan and understand their roles in the disaster recovery process. Key personnel have laptops with remote access capabilities to work remotely.
- BCP Manager is responsible for ensuring this BCP and all of the necessary resources identified within are appropriately distributed and available for use prior to a disruption.

1.7. Recovery Plan Phases

The activities necessary to recover from disaster or disruption and will be divided into four phases.

1.7.1. Disaster Occurrence

This phase will begin with the occurrence of the disaster event and continues until a decision is made to activate the recovery plans. The major activities that will take place in this phase includes emergency response measures, notification of management notification of management to relevant authorities and others, damage assessment activities, and invocation of BCP or Disaster Recovery Plan (DRP).

1.7.2. Plan Activation

In this phase, the BCP will put into effect. This phase will continue until the critical business processes are re-established, and business services are restored. The major activities in this phase include notification and assembly of the recovery teams, implementation of interim procedures, and resumption of processes, and re-establishment of data communications.

1.7.3. Remote Working

This phase will be invoked, in case of any disaster in which primary site is unsafe or unreachable. All Dept/Functions nominated resources will perform their Business As Usuals (BAUs) through remote working.

1.7.4. Transition to Primary Site

This phase consists of any and all activities necessary to make the transition back to a primary facility location.

1.8. Plan Ownership

The BCP Manager has the overall responsibility of maintenance and update of this plan.

1.9. Plan Update or Modification

Due to the change in scenarios and circumstances, any process/plan requires modification to cater the new requirements. Therefore, BCP document also requires constant review and would require to be updated by BCP Manager from time to time and maintenance on need basis to meet new requirements.

1.10. Prior Approval for Changes

No changes will be made in the plan unless reviewed by Business and duly approved and authorized by the BARC & Board. A copy of the updated and approved amendments will be sent to all stakeholders by BCP Manager.

1.11. Plan Communication

BCP Manager shall ensure that all employees, as well as stakeholders who have a role in the Business continuity Management are familiar with the plan as per their roles and responsibilities.

1.12. Training & Awareness

Training and awareness are the most important aspects of the plan. In order for the plan to achieve its objectives, BCP Manager will ensure that all personnel from the TAM Capital should be aware that a plan exists and relevant employees should be given specific training on the actions listed in the BC Plan.

1.13. Audit & Independent Review

The Internal Audit Function or external auditors conduct reviews of BCP annually or incase of major change to determine whether the plan remains relevant, and whether it adheres to the policies and standards. This review include assessing the adequacy of business process identification, business impact analysis and risk assessments, the written plan, testing scenarios and schedules, and communication of test results and recommendations to the Board.

Major findings are brought to the attention of the Board and Senior Management within three months of the completion of the review. Furthermore, Senior Management and the Board of Directors (BoD) ensure that any gaps or shortcomings reported to them are addressed in an appropriate and timely manner.

2 - Business Impact Analysis & Risk Assessment

2.1.Business Impact Analysis Evaluation:

The evaluation of business processes for to evaluate their criticality for organization in case of disaster or any unforeseen event is based on the following criteria.

Impact	Impact Score = 1	Impact Score = 2	Impact Score = 3	Impact Score = 4	Impact Score = 5
	Very Low	Low	Medium	High	Very High
Regulatory / Legal	No legal or compliance impact.	Negotiable lawsuit/ noticeable Regulatory compliance that might lead to Regulator intervention.	Legal peruse and/or Reportable incident to regulator that might lead to financial sentence or regulatory warning letter and fines.	Significant multiple lawsuit sentences and/or major regulatory penalties with public announcement.	Major lawsuit might affect the operations and/or major regulatory penalties and license suspension with public announcement.
Customer	No impact to customer and will not affect the deliverables of services.	Delay or unfulfilled delivery of key products or services that might lead to abnormal customer complaint.	Large number of Customer's calls to contact center and large number of complaints to service quality.	Customer's complaints escalation to Tadawul leading to legal or official warning	Tadawul Intervention to customer's dissatisfactions.
Reputation	No reputational impact on organization.	Minor/ Manageable reputational impact on organization requires attention	Potential reputational impact that might affect the image of the organization, which can lead to partial	High impact that affected the organizational reputation and led to substantial loss of the market share.	Significant impact on the organization reputation that led to losing large portion of market value.

			market share loss.		
Financial	**Incremental income loss from SAR 0 to 5K.**	**Incremental income loss from SAR 5K to 30K**	**Incremental income loss from SAR 30K to 100K**	**Incremental income loss from SAR 100K to 300K**	**Incremental income loss from SAR 300K or greater than 1M.**
Operations	**No impact on daily operations and management**	**Minor impact on delivering the service**	**Medium impact cause delays in the delivery of key products**	**Significant impact requires alternate work around process, Manual work that might lead to human errors**	**Major impact led to disruption of business process and delivery of services**

2.1.1. Maximum Tolerable Downtime for Department

Refer Appendix-A for Maximum Tolerable Period of Disruption (MTPD) for each department of TAM Capital.

2.1.2. Impacts Assessment

Refer Appendix-B for ratings of Fiancial, Reputational & Operational Impact for each department.

2.2. Potential Business Interruptions

In case of any business interruption/incident, TAM Capital's services should continue no matter what kind of emergency is declared. Every incident should be assessed based on their impact and time required to recover from it.

Following are some incidents in which the physical location of the premises or data center is damaged or inaccessible.

2.2.1. Cyber Attack

Any attempt or malicious activity by using internet to deny the service availability or breach the confidentiality of confidential data will be considered as the cyber-attack. In case of any cyber-attack, IT Team with the cooperation of respective departments will take corrective actions as per disaster recovery plan with the guidance of Business Continuity Committee (BCC).

2.2.2. Fire

As the fire alarm rings, staff will evacuate the premises by following the instructions of the fire emergency exit and assemble at the designated evacuation site. After assessment of the situation by BCC, it will be decided whether to invoke the BCP/DRP or not. In case of invocation and

instructions for relocation, all staff will be informed by BCP Manager (if instructed upon) and the critical staff will relocate to the designated relocation site.

2.2.3. Earthquake

As the tremors stop, staff will evacuate the premises by following the instructions of the emergency exit and assemble at the designated evacuation site. An assessment of situation will be carried out whether to invoke BCP or not. In case of invocation of the BCP by the BCC and received instructions for relocation, all staff will be informed by BCP Manager (if instructed upon).

2.2.4. Heavy Rains/Flooding

In cases there is forecasts of the occurrence of heavy rain/flooding; BCP Manager shall intimate the stay of critical staff at the office or ensure availability via remote connectivity/working after getting approval from the BCC. Human Resource Department will maintain the list of critical staff.

2.2.5. Electric Failure

In case of an electric failure, an Uninterruptible Power Supply (UPS) will cover the data center servers/machines, PCs and emergency lights. The staff should endeavor to assist by switching off test server/machines, PCs/all electronic devices that are not in use. In case of a long black out, the generator can be utilized to support essential departments. Relocation process may be invoked after proper assessment of the situation if suggested by the BCC.

2.2.6. Bomb Threat or Terrorism

As the alarm rings, staff will evacuate the premises assemble at the designated evacuation site. After assessment of the situation by the BCC, it will decide whether to invoke the BCP or not. In case of invocation and instructions for relocation, all staff will be informed by BCP Manager (if instructed upon). Mobile phones should not be used at the time of evacuation to avoid a trigger effect in case of a bomb threat.

2.2.7. Law and Order Crisis

In cases where there is information of the occurrence of a strike, BCP Manager shall intimate the stay of critical staff at the office or designated alternate place after getting approval from the BCC (according to assessed severity). Human Resource Department will maintain the list of critical staff . Only critical staff will stay overnight in the office or ensure availability via remote working (if needed) and will join work as per the normal schedule.

2.2.8. Pandemic/Epidemic

BCP Manager in coordination with HR Team will send the staff home at the first sign of any symptoms. They shall be told not to return to the workplace until that they are not infected or recovered completely. Only uninfected staff will continue functioning either from office premises or through remote access as per management decision, but the infected or suspected will be quarantined. Remote working may be activated; working teams shall be split, use of telecommuting, mobile access and remote access to cope with emergencies will be made. video conferencing and other forms of communication technologies will be made, keeping people in touch with each other.

2.2.9. Worst case scenario

In case of invocation of the BCP and instructions for relocation from BCC, all staff will be informed by BCP Manager (if instructed upon). Various incident types have been assessed as mentioned above based on their impact on business as usual. Organization can continue their essential business processes through remote access.

2.3. Relocation Strategy and Alternate Business Site

In the event of a disaster or disruption to the TAM Capital's business operations, the strategy is to recover operations by opting remote working.

Head Office	Primary Datacenter	Disaster Recovery Site

2.4. Risk Assessment

Risk assessment is conducted for various realistic threat scenarios that may cause disruptions to their business processes of TAM Capital. Each threat scenario is analyzed by evaluating its impact on the business processes, business disruption in specific work areas, systems or facilities. Risk assessment is conducted for the various threats and vulnerability that could be encountered. Threats could include but not limited to:

- Failure of or Cyber Attack on IT system making it totally unavailable
- Loss of Power and Internet connectivity
- Loss of Key People
- Loss of Access to Office Premises
- Non- Compliance to existing or new laws & regulations resulting in suspension or denial of permits to operate
- Natural or Environmental disaster (Flood & Pandemics etc.)
- Civil unrest or man-made disaster etc.

Refer Appendix-C for Risk Assessment & Risk Rating Parameters details.

3 - Alternative or Potential Work Around Procedures

Information available indicate that the TAM Capital is highly dependent on IT applications and system availability. There are few alternate or Potential workaround processes are available, which could be used if systems were not available. It has been noted that no alternate procedures are possible, without IT systems. There is a total reliance on IT system availability in the alternative or potential workaround processes for completion, and their loss would effectively halt the processing cycle. Therefore, there are following requirements for alternative or potential workaround processes:

- When alternative procedures are possible, they should be fully documented and tested, and the staff are well trained in their use.
- When no alternative procedures are possible; the relevant systems must have efficient and adequate backup and recovery solutions for timely recovery.

4 - Roles and Responsibilities

4.1.Business Continuity Committee

Business Continuity Committee (BCC) will be responsible for making decisions relating to activating the BCP and supervising the overall resumption of business. The BCC will also supervise the normalization of operations and recovery operations at the primary site. Refer Appendix-D for Business Continuity Committee members details.

The role of the committee is to provide strategic direction and efficient 'fit-for-purpose' operational management capability. The committee is therefore responsible for planning potential solutions, realistically evaluating them and coming to a decision on actions to be taken. The committee is responsible for decisions on a macro level.

The Committee shall be charged with the following responsibilities:

1. Provide guidance and structure to the TAM Capital BCM.
2. Ensure development and regular update of BCM Plans.
3. Approve and review exercise and testing plan along with the results of BC and Disaster Recovery (DR) tests activity.
4. Provide guidance and monitor the implementation of the BCM Plans.
5. Ensure management and timely review of BCM.
6. Evaluate, BC and DR objectives are fulfilled – at least once a year and Business Continuity Plan (BCP) and Disaster Recovery Plan (DRP) are adequately effective.
7. Liaison with internal audit and compliance dept to ensure all statutory and regulatory compliance.
8. Maintain BCM in approved budgets.
9. Report the tests result and audit observations along with the status to the Board of Directors.

The Committee should take the lead in:

1. Managing media expectations and messages;
2. Review and approve Prioritizing between critical business functions;
3. Authorizing expenditure required for effective BCM implementation needs;
4. Authorizing procurement from suppliers/partners (if required)
5. Being the executive decision-making body for the recovery plan;
6. Taking the strategic decisions necessary to manage the resources effectively, especially for emerging and unexpected events;
7. Ensure that these persons are trained on the basis of appropriate education, skills and experience;

4.2.BCP – Manager

The BCP Manager is responsible for:

1. BCP-Manager is responsible to implement BCP on the instruction of BCC.
2. BCP- Manager shall maintain the execution and readiness of BCP in the light of BCC approved documents.
3. Informing the BCC committee of any disaster or incident situation.
4. Working with other management team members to initiate business continuity activities.
5. Maintenance of the BCP Plans, and the organization and management of BCP testing.
6. Conduct training and awareness program for staff regularly in coordination with respective resources from relevant departments/functions.

4.3.Business Continuity Coordinator

1. Provide assistance to the BCP Manager to maintain & update the BCP for their department.
2. Single point of contact for all BCP related communications with the respective department
3. Review and testing of business applications in case of disaster
4. Validate the applicability of BCP and communicate with BCP Manager
5. Ensure that the department staff are well aware of the BCP requirements
6. Develop status reports of the BCP with respect to their own departments.

Refer Appendix-E for Business Continuity Coordinators Details

4.4.Crisis Management Team

TAM Capital has developed a Crisis Management Plan (CMP) with an operational Crisis Management Team (CMT) who are primed to manage any given Crisis. Refer Crisis Management Plan for more details.

In the proposed structure, the Crisis Management Team (CMT) has the responsibility for the direction of the recovery process following a crisis. In particular the CMT has the overall responsibility for:

- Damage assessment and reporting.
- Deciding on the level of recovery needed.
- Making decisions concerning recovery arrangements.
- Co-ordinating the recovery process once initiated.
- Providing overall management support.
- HR activities.
- Media & Communications.
- Business activities.

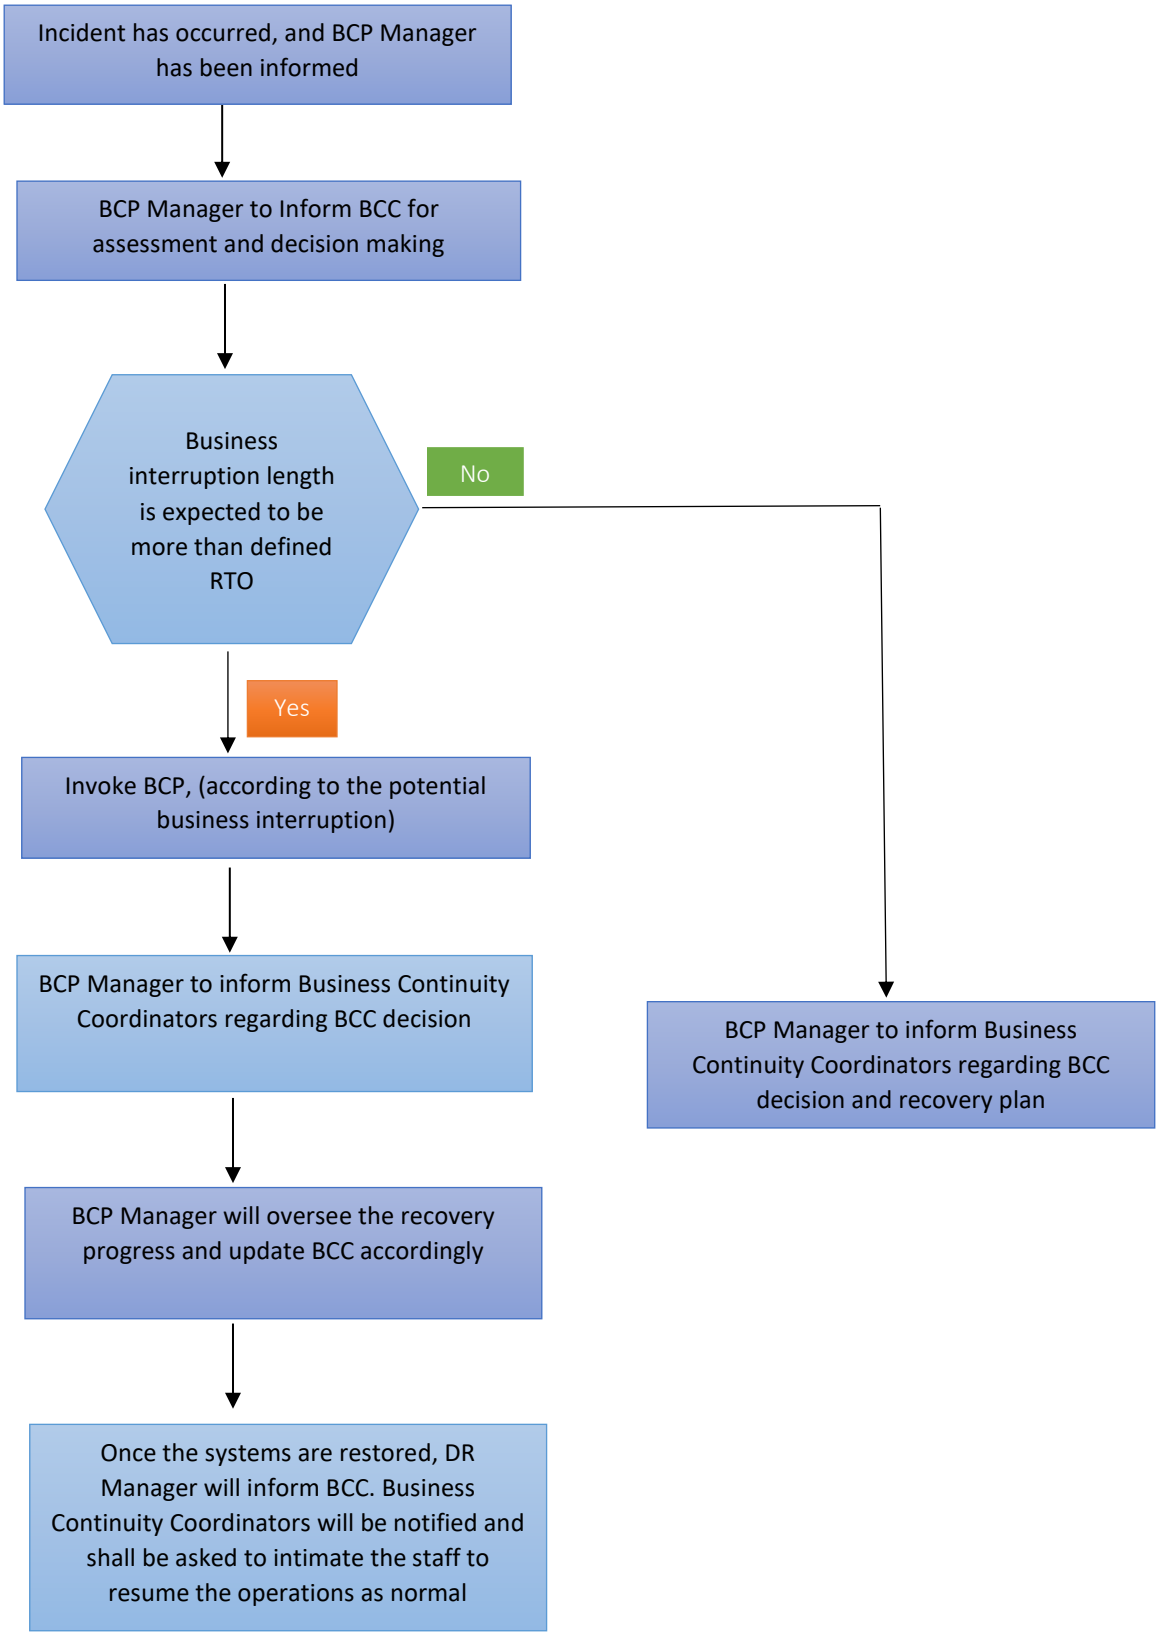
4.5. Disaster Recovery Manager

The Disaster Recovery Manager's role is to own the IT DRP, and ensure that use the plan to restore the minimum acceptable level of IT services are restored as per the plan. Refer IT DR plan for more details.

4.6. Notification and Escalation

In case of a disaster or a major incident which is perceived as likely to cause a significant service outage or interruption:

1. Relevant Business Continuity Coordinators or available staff will inform the BCP Manager in case of the incident.
2. BCP Manager will escalate the information of the incident to BCC.
3. BCP Manager will share the guidelines for further proceedings with the Business Continuity Coordinators as per the instruction given by BCC.
4. In case a Business Continuity Coordinators is not reachable or unable to contact, respective Head of Department (HoD) will be notified by BCP Manager to nominate the alternative or contact him to ensure his availability for coordination with IT and required support.
5. Business Continuity Coordinator will inform their respective teams about the instructions and any necessary information like relocation to remote working or any safety instruction etc. and ensure that all team members are aware about it.
6. BCP Manager will oversee the recovery & restoration process and update the status to BCC. Once the systems are restored, DR Manager will inform BCC. Business Continuity Coordinators will be notified and shall be asked to intimate the staff to resume the operations as normal.
7. Incident assessment will be conducted by Compliance Team to evaluate the nature and severity of incident to report it to Tadawul Immediately and detailed incident report submission to Tadawul within 72 hours.
8. Refer the below mentioned flow chart for sequential flow of activities of notification and escalation in case of disaster/incident.



Incident has occurred, and BCP Manager has been informed
BCP Manager to Inform BCC for assessment and decision making
Business interruption length is expected to be more than defined RTO
No
Yes
Invoke BCP, (according to the potential business interruption)
BCP Manager to inform Business Continuity Coordinators regarding BCC decision
BCP Manager will oversee the recovery progress and update BCC accordingly
Once the systems are restored, DR Manager will inform BCC. Business Continuity Coordinators will be notified and shall be asked to intimate the staff to resume the operations as normal
BCP Manager to inform Business Continuity Coordinators regarding BCC decision and recovery plan

5 - Emergency Response Instructions

Following are the detailed Emergency Response Instructions:

5.1. During Business Hours

The most important priority in the event of potential incident is protection of life. If there is an incident/disaster, follow the standard procedures set out below depending on the nature of the incident:

In case of Fire:

- Raise the alarm by breaking the glass of the nearest fire alarm point.
- Attack the fire with emergency equipment or with fire extinguisher (only if safe to do so).
- If possible, close windows and doors to contain fire.
- Do not try to call fire brigade, bomb disposal squad or Ambulance service, as security personal on duty will perform this duty.
- If you hear the fire alarm evacuate quickly and calmly.

In case of Water Flooding

- Check whether electronic and electrical equipment is affected or not. If equipment is wet, do not touch, but turn off the main power switch.
- If electrical equipment is presently dry, power down normally (i.e., PCs and printers).
- Attempt to stop the source of water; and
- Notify HR, or if unavailable, call the BCP Manager.

In case of Strike, Bomb Blast, Terrorism & Law & Order Crisis

- HR Team will assess the offices premises and city/country situation.
- BCP Manager will inform BCC updated situation.
- BCC will take decision on safety measures to adopt for staff security.
- All staff will be notified about BCC decision and strict compliance will be ensured.

In case of Electric Failure

- An Uninterruptible Power Supply (UPS) will cover the data centre servers/machines, PCs and emergency lights. In case of a long black out, the generator can be utilized to support essential departments.
- The staff should endeavour to assist by switching off test server/machines, PCs/all electronic devices that are not in use.
- If UPS & generators are not turned on or having problems, then available staff should inform the Business Continuity Coordinator or the Head of Department to update the situation to BCP Manager.
- Respective Business Continuity Coordinator or Head of Department will Contact BCP Manager to update the situation.
- BCP Manager will update the situation & share the collected information with BCC.

- Relocation process may be invoked after proper assessment of the situation if suggested by the BCC.

In case of Cyber Attack

- If a staff observes an abnormal or suspicious behaviour of IT system/application or receive an email which was not expected, then inform IT support team directly or via Business Continuity Coordinator or Head of Department/Line Manager first before taking any action.
- Don't turn off the system or application and leave it as it is and handed over to IT Support Team.
- IT Support Team will evaluate the situation.
- If the situation seems to be a potential cyber-attack threat, then BCC will be updated regarding the situation.
- BCC will take expert opinion from Group ISO & Cybersecurity Team for further course of action.
- All staff will be notified about BCC decision and strict compliance will be ensured.

In case of Pandemic/Epidemic & Worst-Case Scenario etc.:

- HR Team will assess the offices premises and city/country situation.
- BCP Manager will inform BCC updated situation.
- Maximum safety measures will be ensured by BCC such as deployment of hand sanitisers, face masks, social distancing and disinfection of premises etc.
- Staff will be requested to follow the measures.
- Infected/suspected staff members will be quarantined or sent home immediately.
- No suspected/infected staff member will be allowed to join the work or make physical contact before presenting the medical certificate.
- BCC will decide to operate from with critical staff member only or continue operations through remote working.
- All staff will be notified about BCC decision and strict compliance will be ensured.

5.2. After Business Hours

If any staff or personnel discover or hear of an emergency which might affect TAM Capital's business processes, follow the following instructions:

- Contact your Business Continuity Coordinator or Head of Department and update the situation
- Remain contactable for further instructions.
- Respective Business Continuity Coordinator or Head of Department will Contact BCP Manager who will use Incident/disaster Assessment Checklist (Refer Appendix-F) to capture key information about the emergency/incident.
- BCP Manager will update the situation & collected information to BCC.
- Wait at home so you can be contacted with further instructions.
- Do not come to work until asked to do so.
- Do not Call THE OFFICE – you could block the lines.

- Do not TALK TO THE PRESS AND MEDIA unless authorized to do so.

5.3. Emergency Response Instructions – BCP Manager

Please refer Appendix-G for BCP Manager Checklist for emergency response

5.4. Restoration Guidelines

Following are the necessary guidelines to follow in process for restoration of business back to primary site (where applicable)

- Premises should be cleared and deemed fit for humans.
- Ensure building safety that it is fit to resume business with all safety measures i.e., emergency exits, fire extinguishers, smoke alarms and fit infrastructure etc.
- Disinfect the building in case of pandemic case and check the building with relevant authorities before authorizing the employee to resume work.
- Electricity and internet connectivity should be available with sufficient space and infrastructure for working normally.

6 - Coordination with External Agencies

6.1. Overview

In case of a disaster, coordination with external agencies becomes vital for limiting TAM Capital's reputational damage and for recovery of business processes.

6.2. Coordination Activities

The BCC will nominate a spokesperson to communicate with the external agencies, depending on the nature of coordination activity. Coordination with external agencies may include but not limited to the following types of activities:

1. Coordinating with security companies whose services are hired.
2. Coordinating with the law enforcement agencies for security related matters.
3. Coordinating with emergency services, such as Police Stations, Fire Brigades, Hospitals, Ambulance Services, and Bomb Disposal etc. in order to evacuate the site and limit damages.
4. Coordinating with regulator for change in contact details and/or change in business processes/functions.
5. Coordinating with suppliers for changed and emergency supplies.
6. Coordinating with customers for change in business processes/functions.
7. Assessing and handling the regulatory, legal and contractual matters evolving from the disaster.
8. Seeking approval and support from relevant government agencies, where applicable.
9. Managing media expectations as well as handling public relations, media queries and releasing official responses of TAM Capital relating to public and media enquiry after approval from BCC.

7 - Human Resources Requirements

Human resources are calculated on the basis of business users required to perform critical business processes via remote working. Human resources are mentioned in term of minimum requirements according to the disruption period.

Refer Appendix-H for Human Resource Requirement details for each department.

8 - Technology profile

8.1. Disaster Recovery

The Recovery Time Objective (RTO) & Recovery Point Objective (RPO) for TAM Capital's critical IT applications/systems, identified with the coordination of Information Technology (IT) Department to fulfil the Maximum Tolerable Down Time identified by the stakeholders/department heads. For, Disaster Recovery Operations. Please refer TAM Capital's Disaster Recovery Plan.

Refer Appendix-I for RTO & RPO for IT applications/systems.

9 - Reconstitution Procedures

9.1. Overview

The Reconstitution Phase, also called the Resumption Phase, is implemented after the Recovery Phase is executed. In the Reconstitution Phase, procedures are carried out to restore the original facility and IT systems back to the normal operating conditions. If the use of the original site or system is not feasible as a result of extensive damage, actions should be taken during the Reconstitution Phase to procure and prepare a new facility or IT systems. When the (original or new) site and systems is ready, recovery activities are terminated, and normal operations are transferred back to the original facility.

9.2. Teams to be invoked for re-establishing Primary Site

Once the critical business functions resumed via remote working, the TAM's CMT as per Crisis Management Plan will instruct the supporting teams to re-establish the affected component of primary site and keep getting updated status of resumption activity.

1. HR Team will perform the following activities in coordination with other Business Continuity Coordinators, concerned business departments and external organization:
    a. Arrange building infrastructure
    b. Arrange movement of equipment, office supplies, furniture etc back to primary site
    c. Arrange office security
2. Disaster Recovery Team will perform the following activities in coordination with other Business Continuity Coordinators, concerned business departments and vendors:
    a. Rebuild the data center
    b. Construct the LAN/WAN infrastructure
    c. Restore the most recent data backup
    d. Install the required Applications
    e. Install all the required system patches
    f. Set all the required system parameters
    g. Establish all the configuration settings
    h. Bring the system back on-line
    i. Run a full test on the system
3. Damage Assessment Team will assist other BCP teams in the identification of salvaged items.
4. Business Continuity Coordinators will assist their departments in the restoration and movement of bothe the hard and soft copies of business documents.
5. Human Resource Team will arrange the required human resources and will administer human resource services.

9.3. Conditions to be checked before moving to Primary Site

When the CMT Leader receives assurance that the site is ready this will mean that following has occurred:

1. All physical repairs to the building have been completed and the building is sufficient for re-occupation.
2. The electricity has been restored.
3. Hardware/Software has been installed and is in working condition.
4. Data restoration activities are completed.
5. The network is ready to resume support of user access.
6. Office security has been placed.
7. Required IT infrastructure has been arranged.

The users will then be able to continue the business activities on the restored environment. The emergency services levels will be gradually replaced by normal operating procedures.

10 - Testing & Maintenance Plan

10.1. Plan Testing & Maintenance Overview

The purpose of testing and maintenance is to ensure the continued effectiveness of the plan in an ever-changing environment.

10.2. Maintenance

Testing is designed to highlight those areas that are not up to date and aligned with the present infrastructure. Moreover, the testing also ensure that all employees are well familiar with the Business Continuity practices and plan alongwith their roles and responsibilities. Hence the testing will identify when maintenance of the plans has not achieved its objectives.

To ensure that plans are updated promptly, the BCP Manager should be made aware of changes, both minor (new staff member) and major (acquisition of new remote office). To achieve this aim, maintenance procedures need to be inherent within the business processes that initiate changes to the business infrastructure. On this basis, the BCP Manager should perform the following activities to help ensure the plans remain up to date. The frequency of reviews should be at annual basis.

10.3. Testing

The plan will be fully tested at least annually or in case of any significant change or event.

A report of the test will be produced for distribution to management, enabling implementation of any action points identified and ensuring revision of this plan following each test. The BCP Manager will be responsible for organizing and managing the test under direction of BCC.

The objectives for conducting the tests are to:

- Verify the compatibility of the recovery processes and to familiarize the recovery teams with them
- Ensure staff are aware of their roles and responsibilities in the event of invoking the BCP
- Test the viability of the plan and amend the BCP to address any shortcomings highlighted during the test
- Test the quality of the systems recovered and ensure the data is consistent with the production systems, and
- Promote awareness of the plan through the business.

Testing is also the key in the maintenance process of the BCP as it will highlight areas of the plan that need updating or revising to support Business Continuity for the organization and hence increase the effectiveness of the plan.

10.4. Planning for the Test

No test should be carried out without documented requirements, objectives and work program. In developing the test program, consideration should be given to running the tests in such a way that participants should only use material that is offsite or available for remote working. Likewise, running surprise tests, with a minimum amount of pre-warning to the test participants, will assist in developing their skills and understanding. Refer Appendix J for Business Continuity Drill Plan Template.

The following table lists the tasks that should be incorporated when planning a test.

Task	Description
Designate a Test Manager	• The Test Manager is responsible for managing the test process from start to finish; this includes test planning, test execution and test reporting. The ideal person to do this is the BCP Manager or their deputy who will probably also has a significant role in the event of a disaster. • The BCP Manager should be seen as the key role in the test process, being the main communication point throughout the testing process. • Unless stated the following actions should be performed by the BCP Manager.
Designate a Test Observer/Facilitator	• The appointment of a Test Observer/Facilitator helps to provide an independent view of the test, ideally, they will be conversant with the BCP plan and able to report back any test actions that deviated from the BCP plan or were not in the plan. • A member of Internal Audit team should be nominated as an independent observer/facilitator.
Develop Test Objectives	• Test Objectives help the Test Manager design the specific activities that will ensure the test provides the assurance that management require from the specific test.
Develop Test Scenario	• Develop a test scenario. This helps to provide a framework for developing the test objectives and timetable and assists the test participants in focusing on the test.
Define Evaluation Criteria	• Identify the milestones and criteria to evaluate the drill success. This evaluation criteria must be aligned with the objectives of BCP.
Identify Business Involvement	• In conjunction with the critical business users define and agree their roles and responsibilities for the test. Clearly this step should be excluded for surprise testing.
Consult Previous Test Report	• The test report from the previous test should be consulted and checks made to ensure that all test problems have been resolved and the recovery plan updated as required. • The test objectives should include a point to ensure that specific activities are included in the test scenario(s) to ensure that the problems from the previous test have been successfully resolved.

Develop Test Timetable	• Develop a test timetable. This should provide an estimate of the elapsed recovery time and should map to the recovery timeframes set out in the recovery plan.
Obtain Management Approval for the Test	• The test manager should present an outline to BCC outlining the objectives of the test, the scenario to be tested, timetables, and expected impact on business as usual, and obtain sign off to proceed with the test.
Inform Test Participants	• Identify the staff who will be involved in performing the test. Ideally, the test participants will be those people who would be involved following a disaster. When planning tests, test participants should be rotated to allow other staff to participate, this assists in developing Business Continuity/IT Disaster Recovery knowledge within the organization. • Inform test participants of the test, when and where they are expected to be and explain the roles they will be performing. Set the test scene by distributing the test objectives and timetable.
Plan the Test	• Organize test objectives and timetable, BCP/DR Sites involvement, arrangements for outside of normal working hours, arrangements for access to offsite data, disaster boxes and equipment, facilities and test participants.
Confirm Third-party & Remote Working Testing Arrangements	• In the event that the test includes testing facilities and functions which may impact a third-party or remote working, for example, switching over to recovery servers or instigating the telecoms redirection, the relevant parties should be consulted. • They should be informed of the planned test actions and timetable. They may be able to offer test data submission to confirm a network link or provide support.
Maintain Business as Usual	• When planning the test, consideration should be given to ensuring that normal operations will not be impacted during the test. For example, although the IT Department will be required to recover the IT environment, steps should be taken to ensure that the production environment remains supported. • Consideration should also be given to the scope of the test, for example, the diverting of network links is a central part of the recovery plan but testing this facility during a working day may be impractical.

10.5. Test Execution

The following table contains tasks that need to be applied and managed at the test execution stage.

Task	Description
Manage the Test	• The BCP Manager should monitor test progress against the test objectives and timetable. Test participants should be encouraged to report problems to the BCP Manager so they can be tracked and managed from one point rather than have a disjointed test with participants going off at tangents.
Perform the Test Without Recourse to Main working environment	• The test should be performed using the resources held offsite at BCP/DR Site(s). The documentation, data and equipment that will be used to recover the IT environment should either be sited at the recovery site or re-called from the offsite storage vendor. Following this approach will highlight the resources that would not be available following a real disaster. Depending on the scope of user testing and the need for reconciliation of data, the IT department and the users may need to consider which data should be used for testing. • The participants should be directed not to bring anything from their normal working environment; again, this will highlight any user requirements that would not be available following a disaster. • In some cases, there may be an exception to this rule, for example, the IT department may wish to test a new facility prior to including it in the recovery process and plan. Tasks such as these should be included in the test planning, execution and reporting processes and upon successful test execution rolled into the recovery process and plan.
Perform the Test Using Actual Plan	• The test should be performed using the BCP plans and test checklists. Test participants should be encouraged to follow the plan closely, noting any discrepancies and missed tasks. The test checklists should be used by the business users to verify that the critical business functions can be performed using the recovered facilities. • Following the test any comments should be reviewed and the recovery plan updated as appropriate.

Task	Description
Use Data Stored at DR Site (if IT recovery part of test scenario) and Hardware at DR Site	• Using the procedures as defined in the IT DRP,
Track Performance during Test	• The Test Manager and Test Observer / Facilitator should be taking notes as the test progresses so that plans can be updated in the light of issues identified during the test. These contemporaneous notes should cover areas such as actual recovery timetables, areas in the plans which did not work as expected and suggestions made during the test as to how the plans could be improved and any suggestions on how the approach to testing might be improved.
Initial Test De-Briefing	• Prior to leaving the recovery site the test participants should compare notes and discuss the successes and problems of the test. The notes taken during the test should be used as an input to this debriefing.

10.6. Post Test

Following any test, the successes, failures need to be evaluated and documented. Out of this identified change, once authorized, can be incorporated into an updated plan. Documentation of test results is of great importance, especially to comply with regulatory requirements. Refer Appendix K for Business Continuity Drill Report Template.

Task	Description
Prepare A Test Report - Highlight Successes/Failures	• Following the test, a recovery test report should be prepared. The report should contain the test objectives and timetable, an assessment of how the objectives and timetable were met; a list of the problems that were encountered during the test and areas where the BCP plans requires updating. • This report should be discussed at the de-brief meetings and a final draft submitted to BCC for approval. After BCC approval, report will be circulated to key test participants.
Hold A De-Brief Meeting with The Test Participants	• A de-brief meeting should be held with the test participants.

Task	Description
	• The meeting should discuss the test report, agree action points and assign responsibility to resolve the test problems.
Update the Recovery Plan	• It is probable that there will be a requirement to update the BCP plans following a test.

Appendix C – Risk Assessment & Rating Parameters

Risk Level Matrix

Risk Rating	Risk will be rated based on the likelihood of occurrence, and the impact. **Likelihood:** It is the probability of occurrence of the potential risk that may lead to the assessed consequence(s). **Impact:** It is the level of consequence that the potential risk can have on the achievement of business / functional objectives. impact could be on legal/regulatory, Operations and Reputation

Impact: The *impact* of any given risk will be measured on a scale of one to five using the following guidelines:

Score	Rating	Description
5	**Significant**	Risk event that would affect the business continuity of the organization and is fundamental to the achievement of objectives.
4	**Major**	Events which can be endured but which may have a prolonged negative impact and extensive consequences.
3	**Moderate**	Risk event where the organization would have to arrange for additional resources to effectively mitigate the risk.
2	**Minor**	Risk event is expected to have minimal effect on achievement of objectives and the organization has the resources available to mitigate the risks.
1	**Notable**	Risk event is expected to have negligible impact which will be effectively mitigated by routine procedures.

Likelihood: For the purpose of this risk assessment, the likelihood of risk occurring will be measured on a scale of one to five using the following guidelines:

Score	Likelihood	Description
5	**Almost Certain**	Expected to occur on a regular basis or within the next 6 months/ 90% or greater chance of occurrence of event
4	**Likely**	Expected to occur within the next 12 months/ 65% up to 90% chance of occurrence of event
3	**Possible**	Expected to occur within the next 18 months/35% up to 65% chance of occurrence of event
2	**Unlikely**	Expected to occur within the next 24 months to 3 years/10% up to 35% chance of occurrence of event
1	**Rare**	May occur in exceptional circumstances or not before the next 3 years from now/<10% chance of occurrence of event

The below table describes the risk scale with its ratings of High, Medium, and Low, represents the degree or level of risk to which a system, facility, or procedure might be exposed. The risk scale also presents actions that the management must take for each risk level.

Risk Score	Risk Level	Description
16-25	High	There is a need for corrective measures. An existing system may continue to operate, but a corrective action plan must be put in place on priority basis.
8-15	Medium	Corrective actions are needed and a plan should be developed to incorporate these actions within a reasonable period of time.
1-7	Low	The management should determine whether corrective actions are still required or decide to accept the risk, as the significance of the risk is low.

Appendix D – Business Continuity Committee Members Details

S.No	Designation	Name	Role in the committee	Contact No.	Email
01	CEO

Appendix F – Incident Assessment Checklist

To be used by BCP Manager on being informed of incident.

Name of reporting party:	**Department (if reporting party is TAM's employee):**
Date/time of Disaster Occurrence:	**Location of Disaster:**
Description:	
Details of immediate action taken:	
First aid administered and who by:	
Was ambulance required:	**Yes/No**
Have other emergency services been notified:	
Witnesses and likely public knowledge of incident:	
Preliminary assessment on damage to building, impact of staff, disruption to business processes:	

Appendix G - BCP Manager Checklist

S. No.	Description of activity	Completed
1.	Disaster/Incident occurs and BCP Manager notified (Incident Assessment Checklist used)	
2.	BCC notified and asked to convene at Board Room or remotely.	
3.	Account for all personnel if in office hours (out of hours account for those present at location). Check with Personnel for any injured staff and authorize contact with next of kin.	
4.	Confirm Board Room or connect remotely for decision making	
5.	Collate all preliminary information on the incident/disaster from Incident Reporter. Identify recovery timescales expected.	
6.	Maintain contact with emergency services, especially for updates on staff/building condition.	
7.	Contact Chairman BCC to inform them of present situation, steps taken so far, and recommended next steps and begin release of emergency funds, if required.	

Appendix H – Human Resource Requirement
