1. INTRODUCTION

This policy has been approved by the Board of Directors ("Board") of Tam Capital ("Company"). It represents an enforceable document relating to Company policies.

This policy defines the overarching framework and principles governing the management of Information Technology (IT) within Tam Capital. The purpose is to ensure efficient, secure, and reliable IT services that support organizational objectives, safeguard digital assets, and foster a culture of accountability and continuous improvement.

The policy applies to all employees, contractors, vendors, and third-party users who interact with, manage, or utilize IT systems, networks, and data owned or operated by the Company.

2. REFERENCE TO OTHER DOCUMENTS

The policy may be read in conjunction with following regulations and internal documents:

- Capital Market Institutions Regulations
- IT Procedures
- Cyber Security Policy
- Disaster Recovery & Business Continuity Plans
- Other relevant documents

3. POLICY STATEMENTS

3.1 IT Planning & Budgeting

- IT planning shall be conducted annually to align IT initiatives with strategic business goals.
- The IT budget must include provisions for infrastructure upgrades, software acquisition, cybersecurity, training, and vendor contracts.
- Budget proposals must include a business justification, cost-benefit analysis, and risk evaluation.
- Performance metrics shall be used to assess the return on IT investments.

3.2 IT Organization

- The IT department shall be appropriately structured into strategic, operational and security units.
- The Head of Department or IT Manager shall lead IT governance and ensure policy compliance.
- Clear role definitions must be in place to manage responsibilities for systems administration, support services, network operations, and security enforcement.

3.3 IT Asset Management

- All IT assets shall be recorded in a centralized Asset Inventory System.

  Assets include hardware, software, peripherals, licenses, mobile devices, and cloud subscriptions.
- Asset lifecycle management shall encompass acquisition, deployment, usage, maintenance, and disposal.
- Asset audits shall be conducted periodically to validate inventory accuracy.

3.4 IT Project Implementation & User Access Testing (UAT)

- All IT projects must follow a formal implementation methodology, including planning, design, development, testing, deployment, and review.
- A project charter and scope document must be created and approved by relevant stakeholders.
- User Acceptance Testing (UAT) must be performed before final deployment to validate system functionality and usability.
- UAT must involve end users, and feedback should be documented and addressed before project closure.
- A post-implementation review should be conducted to assess success criteria, identify lessons learned, and ensure business objectives were met.

3.5 IT Configuration Management

- IT configurations for servers, networks, endpoints, and applications must be documented.
- A Configuration Management Database (CMDB) shall be maintained to track system setups and dependencies.
- All configuration changes must follow the approved change management protocol.
- Configuration baselines must be defined and reviewed regularly.

3.6 IT Operations & Helpdesk

- An IT Helpdesk must operate during business hours with clearly defined SLAs.
- Helpdesk services include incident handling, service requests, and user support.
- A ticketing system must log all issues, actions taken, and resolution timelines.
- Knowledge base articles should be maintained to address recurring problems and FAQs.

3.7 IT Maintenance

- Preventive maintenance shall be scheduled to ensure optimal performance of IT infrastructure.
- Corrective maintenance must be performed promptly following fault detection.

- Maintenance schedules must be documented and communicated to minimize service disruption.
- Maintenance activities should be logged and subject to review.

3.8 IT Capacity Management

- Regular performance monitoring is required to ensure systems meet current and future business needs.
- Capacity planning must include projections based on usage trends, business growth, and application demands.
- Reports on system utilization, bandwidth, storage, and processing capabilities must be reviewed quarterly.

3.9 IT Change Management

- All IT changes must be logged, evaluated, tested, and approved prior to deployment.
- The IT Steering Committee shall review and authorize significant or high-risk changes.
- Emergency changes must follow a post-implementation review process.
- All changes must be documented, with rollback procedures in place in case of failure.

3.10 IT Network Security

- A defense-in-depth strategy must be adopted to protect the company's network infrastructure.
- Security controls include firewalls, intrusion detection/prevention systems, antivirus software, and encryption.
- Access control policies must enforce the principle of least privilege.
- Regular penetration testing and vulnerability scans must be conducted.

3.11 IT Software Management

- Only licensed and authorized software may be installed on company systems.

- Software usage must comply with licensing agreements and copyright laws.
- Regular audits must be conducted to identify unauthorized or obsolete software.
- Software updates and patches must be applied in a timely manner.

3.12 IT Incident Management

- All IT-related incidents must be reported and documented immediately.
- An Incident Response Team (IRT) shall coordinate detection, containment, investigation, and recovery activities.
- Incidents must be classified by severity, and response actions prioritized accordingly.
- Lessons learned must be documented and used to update incident response plans.

3.13 IT Log Management

- System and user activity logs must be captured and maintained securely.
- Log data must be protected against tampering and reviewed regularly for anomalies.
- Retention periods must comply with legal and regulatory requirements.
- Logs must support forensic investigations and compliance audits.

3.14 Disaster Recovery

- A Disaster Recovery Plan (DRP) must be developed, maintained, and tested annually.
- Backup procedures must ensure availability of critical systems and data.
- Recovery Time Objectives and Recovery Point Objectives must be defined and regularly validated through testing.
- Offsite and cloud-based backups must be encrypted and monitored.

3.15 Data Protection & Privacy

- Personal and sensitive data must be handled in accordance with applicable data protection laws.
- Data must be collected, processed, and stored with appropriate safeguards and transparency.
- Access to personal data must be restricted and monitored.
- Privacy impact assessments should be conducted for new systems handling sensitive data.

3.16 Cloud Services & Third-Party Providers

- Cloud solutions must be assessed for security, compliance, and cost-effectiveness.
- Third-party service providers must undergo due diligence and sign data protection agreements.
- Cloud usage must follow approved governance and integration processes.

3.17 Mobile Device & Remote Access Management

- All mobile and remote devices must comply with the organization's security standards.
- Remote access must be secured using VPNs, multi-factor authentication, and endpoint protection.
- Lost or stolen devices must be reported immediately.
- Mobile Device Management (MDM) solutions should be used to enforce policies and wipe data if necessary.

3.18 IT Awareness & Training

- All employees must undergo regular IT security and usage training.
- Awareness campaigns should be conducted to mitigate phishing and social engineering threats.
- IT policies and procedures must be easily accessible and regularly communicated.

3.19 Compliance

- All users are expected to understand and comply with this IT Policy.
- Non-compliance may result in disciplinary action, including termination or legal action.

4. RESPONSIBILITIES

4.1 Executive Committee

The main responsibility of the Executive Committee over IT incudes provision of strategic oversight and ensure IT aligns with corporate goals and objectives; approval of major IT investments, transformation programs, and policy changes; review and endorsement of annual IT plans, budgets, and risk assessments; monitoring the effectiveness of IT governance, cybersecurity posture, and digital innovation efforts; and ensuring IT priorities reflect business needs and stakeholder expectations.

4.2 IT Steering Committee

An IT Steering Committee of the management shall serve as the primary decision-making body for IT projects, priorities, and resource allocations. It should:

- Evaluate and approve project proposals, including scope, timelines, and budgets.
- Monitor the progress of ongoing IT initiatives, ensuring alignment with business units.
- Resolve interdepartmental conflicts related to IT requirements or dependencies.
- Review risks, issues, and change requests associated with IT implementations.
- Promote communication and collaboration between IT and other departments.

4.2 Chief Executive Officer

The CEO shall provide strategic oversight and leadership on IT policy implementation. Annually, the CEO shall review and approve the IT strategy and ensure alignment with organizational goals. He/she shall also ensure that resources and funding are allocated appropriately to IT initiatives.

4.3 Head of IT

The Head of IT shall oversee the overall management and execution of all IT-related functions, including infrastructure, operations, security, and support; develop the IT strategy and budgets in line with business objectives; ensure compliance with IT asset, configuration, change, and capacity

management practices; implement and monitor network security, disaster recovery, and data protection protocols; and lead IT project implementations and user acceptance testing.

4.4 IT Staff

All IT staff must:

- Follow approved IT procedures and best practices for systems, networks, and support.
- Maintain accurate documentation of systems, changes, and incidents.
- Ensure timely support through helpdesk services and meet SLAs.
- Monitor system performance, conduct backups, and apply security patches.
- Participate in IT projects, testing, and implementation activities.
- Report security incidents, non-compliance, or system anomalies promptly.

4.5 Company staff

All employees of Tam Capital must:

- Adhere to this IT Policy and related security guidelines.
- Use IT systems, software, and data responsibly and ethically.
- Safeguard passwords, devices, and access credentials.
- Report any IT incidents, suspicious activity, or policy violations to the IT Helpdesk.
- Complete required IT and cybersecurity awareness training.
- Avoid unauthorized software, devices, or external storage on company systems.

5. AMENDMENT TO THE POLICY

This policy document will be reviewed and updated at least once every three years or as and when needed.
